Main Window Preferences

Display namespace in the toolbar
Whether to display the Namespace in the toolbar. This is not fundamentally different from the "**Edit** -> **Change Namespace**" option, it simply provides a quicker way to select the Namespace.

Show Tab Bar
Whether to display the tab bar. (If you want the picker to feel more focused, you can try hiding it.)

Auto-switch tabs by selected node
Automatically switch to the corresponding picker based on the selected object (if the node has already been added to the picker's internal buttons).

Show a warning when closing a tab
Whether to display a warning dialog when closing the picker.

Show Tool Box
Whether to display the tool box widget. (If you want the picker to feel more focused, you can try hiding it.)
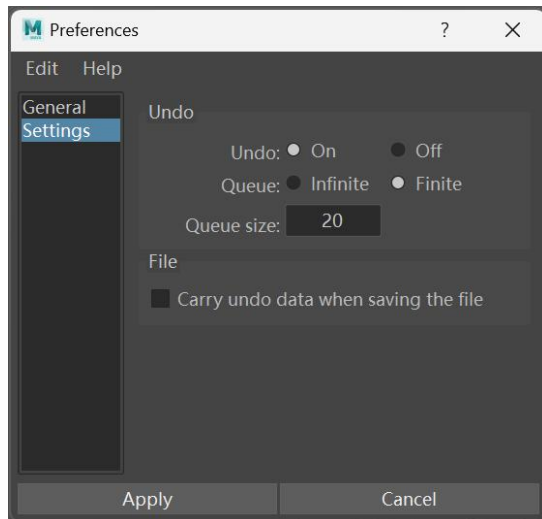

Picker Preferences

ViewPort Mode
This option provides "**Auto-Centered**" and "**Fixed**" for selection.
The former automatically centers the view, while the latter fixes the view (similar to **AnimSchoolPicker** behavior).

Zoom Sensitivity
Scene zoom mouse sensitivity.

Undo Preferences

Undo
Whether to enable undo functionality. If you choose to disable undo, all undo data for the current Picker will be deleted.

Queue
Number of undo steps, either limited or unlimited.

File Preferences

Carry undo data when saving the file
Whether to carry undo data when saving the file. (This option is disabled by default, as enabling it will significantly increase the file size!)
